

Item Planted	Area Planted	Outcome	Yield
1. Popcorn	Bed beside shed	The space was too small. Animals ate the young seedlings. Birds ate the tassels from the young corn.	Low: one pint of popcorn.
2. Potatoes	Garden-scaping plot; in a large container	The potatoes had amazing vines, but few potatoes.	Poor
3. Zucchini 1	Garden-scaping plot	Grew well	Produced heavy
Zucchini 2 & 3	Plot beside house	Grew well: The plants did not have enough light or room to spread out.	Produced lower yield.
4. Heirloom Cherokee Tomato (3 plants)	Plot beside house	Grew well: Stink bugs ate into this type of tomato. I mean they loved them!	Produced heavy, even with us having to share with the stink bugs!
5. Roma Tomato (3 plants)	Plot beside house	Grew like crazy. Had to prune them continually.	Produced heavy. We had Romas up into late October.
6. Early Girl Tomato (1 plant)	Plot beside house	Produced tomatoes at least three weeks before other varieties.	Produced heavily early own. Slowed down as summer temperatures increased.
7. Cucumbers	Plot beside house	Grew well	Produced heavily through the end of August.
8. Herbs planted Stevia Peppermint Lemon balm Cilantro	Garden-scaping plot and containers.	Herbs planted directly in the ground produced much better than the same variety that was potted.	Used herbs throughout the summer but did not harvest to dry for later use as intended. Will plant all herbs in the ground in the future.
9. Pollinator Garden	Garden-scaping plot	The pollinator garden was a joy to watch.	Provided support to pollinators and flowers for cut arrangements for me.
